

ABSTRACT OF THE DISCLOSURE

A digital music conversion device for converting digital music files in a first format into ones in a second format. The converted digital music files are stored in a portable recording medium. Using the disclosed conversion device, a digital music file in the first
5 format that occupies a larger storage space is converted into one that occupies less space. Therefore, the latter can be stored in a portable storage medium. In comparison with the prior art, the invention does not need a computer to perform file format conversions and has simpler operations.
